

Regenerating North Solihull

When Bellway Homes, one of the Regenerating North Solihull partners, embarked on 100 new homes as part of the £1.8 billion project, they were looking for a utility provider with proven experience of the issues associated with redevelopment sites – and Energetics didn't disappoint.

The result was a truly bespoke design solution that combined National Grid existing mains with new gas and electricity mains

Project: Multi-utility
Client: Bellway Homes
Key features: two main gas connections and 11 connections to existing mains (Craig Croft); 15 gas connections off existing mains (North Arran Way)
Assets: gas and electrical infrastructure and connections adopted by Energetics Gas and Energetics Electricity

Doing the groundwork

Regenerating North Solihull

Disconnections, diversions, space restrictions – identifying and understanding the existing utilities at the 1000-acre Regenerating North Solihull site was key to delivering the most efficient electricity and gas infrastructure for our client Bellway Homes.

With 100 houses to supply across two of the project's five new villages – Craig Croft and North Arran Way – our Design & Build team wasted no time in identifying the existing utilities, which could be worked with and which needed to be disconnected. The result was a truly bespoke design solution that combined National Grid existing mains with new gas and electricity mains.

And because we do what we say we will do, we then ensured that the new infrastructures were excavated, laid and energised on time for both villages. Testament that doing the right groundwork gets the right result.
